

Web Design: Week 8 Assignments

1. *Do the reading for Week 8. See syllabus. (due next week)*
2. *Use the info from your Hosting/Domain Worksheet to connect your domain name to your hosting account.*
3. *Push your website production as far as you can for next week's critique. Upload (publish) these files to your hosting account so that we can view your website live.*

Guidelines

Follow the procedure demonstrated in class and outlined below to setup work on your website this week with the Templates.

1. *Use Dreamweaver and use Manage Sites to define your website locally as normal.*
2. *Select the Servers section and add a new server. This will bring you to the FTP area.*
3. *Use the info on your worksheet to fill out the correct FTP info for your hosting account. Click Save and Done.*
4. *Now use the expanded Files panel to connect to your server and upload the files. For your website to work properly online you will need to upload all html files and supporting files such as all external CSS and images.*
5. *If you need to update your website after this point, simply upload and replace old files on the server with the newly edited ones.*
